

Flossbach von Storch - Multi Asset - Balanced - RT

INVESTMENT STRATEGY

Flossbach von Storch - Multi Asset - Balanced offers comprehensive integrated asset management for long-term investors. The fund management invests globally in equities, bonds, convertible bonds, currencies, precious metals (indirectly) and investment funds according to the principle of risk diversification. Derivatives may be used for hedging purposes or to optimise returns; the equity quota may range between 25 per cent and 55 per cent. The investment strategy includes in-house valuation models, ESG integration, engagement and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The Fund distributes once a year. The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is classified as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

² Share class RT of the sub-fund "Flossbach von Storch - Multi Asset - Balanced" was launched on 13.07.2015. The performance data up to 12.07.2015 is a simulated historical performance. It is based on the performance of another Luxembourg sub-fund that had been launched on 23.10.2007 and was merged into this sub-fund effective 1 July 2015. The simulated historical performance takes into account the fee structure of share class RT. Simulated performance is intended purely as an indicator and does not allow any conclusions to be drawn regarding the actual future performance.

MONTHLY COMMENTARY

July was an eventful month with two central bank meetings and the start of the reporting season for many companies. Against a backdrop of persistently high inflation rates, the European Central Bank raised key interest rates by 0.5 percentage points, leaving negative territory after more than eight years. The US Federal Reserve took even more decisive action against inflation, raising its rates by 0.75 percentage points. The central banks' actions increasingly triggered investors' fears of a recession, which is why yields on bonds with longer maturities fell significantly while central bank interest rates were higher. At the same time, many companies proved that they are able to pass on higher prices to customers and thus increase their profits. The combination of lower bond yields and higher corporate profits have caused equity markets to rise significantly. In this environment, the Fund was able to achieve a value increase of 4.2 %. Equities and bonds performed positively, with the profit contribution from equities being the highest. Gold (indirect, in euros) remained almost unchanged from the previous month. Noticeably negative value contributions came only from currency hedges on part of our US dollar positions. In equities, we made only minor position adjustments and increased our positions in Charles Schwab, Dassault Systèmes and MSCI, among others. In contrast, we reduced our holdings in Moody's, Novo Nordisk, and Roper Technologies. In the fixed-income segment, we swapped our holdings in US government bonds completely for short-dated German Bunds. In addition, we selectively sold individual corporate bonds, such as bonds from Cellnex and Vonovia. At the end of the month, the bond quota and duration stood at 32.3 % and 1.6, respectively.

Flossbach von Storch - Multi Asset - Balanced - RT

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. The ESG criteria restrict the selection of target investments in terms of category and number, sometimes considerably. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the KIID and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK/RETURN PROFILE

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium fluctuation, therefore the profit potential and loss exposure may be moderate. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
