

Flossbach von Storch - Bond Opportunities - USD-HT⁴

INVESTMENT STRATEGY

Flossbach von Storch - Bond Opportunities is a globally diversified bond fund with an active investment approach that focuses on corporate bonds, government bonds and covered bonds. The Fund flexibly exploits the opportunities of the entire bond market. In addition to bonds with an investment-grade quality, the fund management can also invest in bonds without a rating or in those that do not have investment-grade quality. Foreign currency risks are currently only entered into to a manageable extent. Securities selection is based on a fundamental research and analysis process. The fund manager relies on research tools developed in-house. The investment strategy includes in-house valuation models, ESG integration, engagement and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is categorized as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred. **Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund.** Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

¹ Until 15 November 2024, the performance was simulated using the performance of the USD-IT share class (LU2035372049) of the Flossbach von Storch - Bond Opportunities sub-fund. Any differences in the remuneration structure were taken into account in the simulation. Both the USD-IT share class and the USD-HT share class have the same investment policy.

² In addition to the management fee, the fund is charged further costs such as transfer agent fees, transaction costs, and various other charges. Further information about ongoing and one-off costs can be found in the key information document (PRIIP-KID), the sales prospectus, and the most recent annual report.

³ Conversion into the share class currency is based on the exchange rate on the day.

⁴ If the costs or performance are shown in a foreign currency, they may increase or decrease due to currency fluctuations.

MONTHLY COMMENTARY

In February, US Treasuries continued to outperform their euro-denominated counterparts. Solid US inflation data caused a setback on the bond market in the first half of the month, but disappointing US retail sales then led to a change in sentiment. The recovery rally was further exacerbated by the US purchasing managers' index (services PMI), which was noticeably weak for the first time in a long time, and an environment of weakening US equity markets. The yield on five-year US Treasuries fell by around 31 basis points (bps) over the month. On the other side of the Atlantic, German Bunds came under pressure in the run-up to the German federal election, with speculation about a significantly higher issue volume and a loosening of the debt brake (particularly to finance expected higher defence spending) weighing on the market. In addition, the continued high level of issuance of long euro maturities slowed the rally led by the US bond market. The yield on five-year German Bunds was around 8 bps lower than the previous month, while risk premiums on French government bonds and European covered bonds in particular continued to narrow against German Bunds (around 5 to 6 bps in the 10-year maturity range). There were no major changes in traditional spread products. We kept the overall duration in the portfolio largely unchanged, although we increased our US dollar duration contribution mainly by reallocating to medium-term maturities. We took advantage of the rally at the end of the month to take profits on corporate bonds, particularly in the mid-rating range (BBB), which further improved the quality of the portfolio. We also took advantage of the recent outperformance of swap-based products (such as covered bonds) in the euro area to reallocate to core government bonds.

FUND MANAGEMENT

Frank Lipowski
at Flossbach von Storch since 2009.

Team Fixed Income

Deputy and operational collaboration is conducted through our Fixed Income Team.

Flossbach von Storch - Bond Opportunities - USD-HT

OPPORTUNITIES

- + Participate in global bond market growth.
- + Income can be generated from regular interest payments.
- + Active interest rate, currency and risk management (e.g. from the use of derivatives).

RISKS

- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium-term: 3 to 5 years

RISK INDICATOR

Lower risk Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you.
