

Flossbach von Storch - Global Convertible Bond - I

INVESTMENT STRATEGY

The Flossbach von Storch - Global Convertible Bond represents a defensive alternative to pure equity investments. The convex profile of convertible bonds enables investors to profit from rising prices on the equity market while at the same time limiting price risks. Security selection is based on a fundamental analysis process using in-house valuation models. If no convertible bond is available for an underlying security that appears attractive, or if its structure does not match the desired profile, the fund management can combine bond and call option to present a similarly attractive structure. Other in-house valuation models include ESG questions, and engagement. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. Foreign currency risks are currently largely hedged. The fund invests globally in convertible bonds. The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the UBS Thomson Reuters Global Focus Hedged Convertible Bond Index as a benchmark. The investment manager is not linked to the Index at any time when making investment decision and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the reported benchmark. The Sub-Fund is categorized as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred. Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund. Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

MONTHLY COMMENTARY

March was almost entirely dominated by the military escalations surrounding Iran. The resulting turmoil in the Persian Gulf led to a marked increase in oil and gas prices, bringing concerns about security of supply, inflationary pressures and growth risks to the forefront. Equity markets responded with a notable correction (MSCI World: -4.9% in US dollar terms), with declines more pronounced in Asia and Europe than in the United States. While the US S&P 500 equity index fell by around 4.4% (in local currency terms), the EURO STOXX 50 declined by 7.2% and the Hang Seng by 5.4%. The previously outperforming indices in Japan (Nikkei 225: -10.3%) and South Korea (KOSPI: -15.9%) were hit particularly hard.

Growing inflation concerns were also clearly reflected in global bond markets. This was further reinforced over the course of the month by notably more restrictive central bank rhetoric, as well as by forced position closures among hedge funds following the abrupt increase in interest-rate volatility (liquidation of so-called "carry trades"). In both Europe and the United States, yields rose significantly, particularly at the short end of the curve. For example, yields on two-year German Bunds increased by 62 basis points (bps) within a single month, while their US counterparts surged by 42 bps. During the reporting period, markets at times priced in up to four ECB rate hikes by the end of 2026. In the United States, expectations also shifted from rate cuts towards potential rate hikes. By month-end, markets were pricing in three ECB rate hikes and an unchanged policy rate from the Federal Reserve (Fed) by year-end. Corporate bonds were likewise unable to escape the risk-off environment; in particular, the high-yield segment of lower-rated issuers saw a noticeable widening of credit spreads alongside the rise in yields.

Rising yields, wider credit spreads and falling equity markets also represent an unfavourable environment for convertible bonds. The Fund price was unable to escape this trend and gave up the gains achieved since the beginning of the year during the reporting period, returning to roughly its level at the end of 2025. As a result of weaker equity markets, the Fund's delta fell to around 42% by the end of the month.

Flossbach von Storch - Global Convertible Bond - I

OPPORTUNITIES

- + Investing in funds can deliver an attractive result at a lower level of risk compared to a direct investment in equities.
- + Income can be generated from regular interest payments.
- + Convertible bonds can increase in value when equity markets rise.
- + Derivatives can be used to increase potential yields.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.

RISKS

- Investing in convertible bonds may entail price risks, especially in the case of rising interest rates on the capital markets.
- Convertible bonds can decline in value when equity markets fall.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).
- The straight concentration on special markets can have a negative impact because of the dependent performance of these selected markets.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: ≥ 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 4 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you. Unusual market conditions could arise, for example, due to currency, credit-worthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus.
