

Flossbach von Storch - Multi Asset - Balanced - IT

INVESTMENT STRATEGY

Flossbach von Storch - Multi Asset - Balanced offers comprehensive integrated asset management for long-term investors. The fund management invests globally in equities, bonds, convertible bonds, currencies, precious metals (indirectly) and investment funds according to the principle of risk diversification. Derivatives may be used for hedging purposes or to optimise returns; the equity quota may range between 25 per cent and 55 per cent. The investment strategy includes in-house valuation models, ESG integration, engagement and voting. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The Fund distributes once a year. The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is categorized as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred. **Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund.** Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

MONTHLY COMMENTARY

The last month of the first quarter of 2025 was also marked by uncertainties surrounding the announcements of trade policy measures. The back and forth on tariffs made it difficult for companies to plan and this unsettled consumers. This led to corresponding fluctuations in the capital markets. The US S&P 500 equity index (in US dollars, including dividends) lost 5.6% over the month. A 4.1% depreciation of the US dollar against the euro intensified the negative effect for European investors. In contrast, European equities, as measured by the STOXX Europe 600 (including dividends), corrected significantly less, losing 3.7% in value. This was also due to the announcement in Germany of billions of euros of credit-financed government investment in armaments and infrastructure. These plans also affected the bond markets. In the context of the watering down of the 'debt brake', yields on 10-year German Bunds rose by around 30 basis points on the day of the announcement – the highest increase since reunification. This increase also roughly corresponds to the change from the previous month. At the end of the month, German Bunds were yielding 2.7%. The price of gold again performed very positively, rising by 9.3% (in US dollars). In this environment, the Fund price fell by -2.1 %. Losses on equities and bonds were only partially offset by gains on gold and currency hedging transactions. At the start of the month, we increased our allocation to gold (not physical) by around half a percentage point. This purchase and the rise in the value of the precious metal increased the share of the portfolio to 6.8 % compared to the previous month. Regarding equities, we sold our holdings in Medtronic completely. We have built up new positions in Novo Nordisk and IDEX. The latter acquires industrial companies that manufacture critical components, such as pumps, valves and flow meters, which are used in agriculture, the food industry and firefighting, for example. At the end of the month, the equity allocation was slightly lower at 42.6 %. In the bond segment, we participated in new issues from BlackRock and DHL. In addition, we sold a Bechtel convertible bond. At the end of the month, the bond quota was 40.7 %, the duration and current yield were 5.2 and 3.4%, respectively. The weighted average rating of the bond portfolio remains unchanged at AA.

Flossbach von Storch - Multi Asset - Balanced - IT

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. The ESG criteria restrict the selection of target investments in terms of category and number, sometimes considerably. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the key information document (PRIIP-KID) and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you.
