

Flossbach von Storch - Multi Asset - Growth - IT

INVESTMENT STRATEGY

Flossbach von Storch - Multi Asset - Growth offers comprehensive integrated investment management for long-term investors. The fund management invests world-wide on the principle of risk diversification in equities, bonds, convertible bonds, currencies, precious metals (indirect) and investment funds. Derivatives may also be used for hedging purposes or for optimising returns; The equity component may range between 25 per cent and 75 per cent. The fund management uses an in-house developed valuation model when selecting individual stocks. The fund pays a dividend once per year. The sub-fund is actively managed. The fund manager determines, regularly reviews and, if necessary, adjusts the composition of the portfolio exclusively in accordance with the criteria specified in the investment policy. The sub-fund is not managed in reference to a index.

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred.

Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund.

Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

MONTHLY COMMENTARY

The optimism on the stock markets continued in March. A committed vaccination campaign in the USA and positive economic expectations boosted the markets. The global MSCI World equity index gained 6.7 per cent in euro terms, whereby the recently stronger US dollar also had a positive effect on investors from the euro area. Further sharp rises in interest rates in the USA caused prices to fall, especially for bonds with long maturities. The gold price lost 1.5 per cent (calculated in US dollars), while the precious metal was about 1.3 per cent steadier in euro terms. In this environment, the Fund recorded a strong increase in value over 3.69 %. Equities delivered by far the highest value contributions, with bonds contributing at least a small part to the pleasing performance. The results of both asset classes benefited from the appreciation of many foreign currencies (in particular the US dollar), which we had only partially hedged through forward transactions. In March, we completely sold our equity holdings in Check Point Software and United Internet. We increased our positions in Amazon, Paypal and Salesforce, amongst others. At the end of the month, the equity quota was about two per cent higher than the previous month at 68.3 %. Conversely, we sold a euro-denominated hybrid bond from Tennet. In addition, we took advantage of the now much more attractive interest-rate level in the USA to gradually extend the duration on the US dollar yield curve. Among other things, we subscribed to a new issue of MSCI. In addition, we are taking advantage of the now significantly more attractive level of interest rates in the USA to gradually extend the duration of US bonds. While widespread investor optimism due to the anticipated pandemic response, the large US fiscal package and rising inflation expectations is currently supporting the upward trend in yields, we expect this trend to lose steam over the course of the year, making longer-dated US dollar bonds increasingly attractive. The overall duration of the fixed income sector increased to 8.2 years, with the fixed income quota at 15.2 %. Liquidity decreased during the month to 7.3 %.

- » Investment Adviser and Bank Trainee at Bankhaus Delbrück & Co. in Aachen/Cologne (1988–1993)

Flossbach von Storch - Multi Asset - Growth - IT

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the KIID and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK/RETURN PROFILE

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium to significant fluctuation, therefore the profit potential and loss exposure may be moderate to high. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
