

Flossbach von Storch - Multiple Opportunities II - USD-IT

INVESTMENT STRATEGY

The fund pursues an active investment approach. The fund manager can invest in any investment classes that, in his opinion, appear to be attractive in the relevant capital market environment. The basic principle for asset allocation is an idiosyncratic, independent view of the world that is modelled from economic, political and demographic parameters and is under constant review. A thorough company analysis is performed to assess whether an individual investment is attractive. A determining factor for each investment decision is the risk-reward ratio. The potential for yield must considerably overcompensate for any risks of loss. The portfolio structure, and thus the fund's risk-reward profile, is aligned to the five Flossbach von Storch pentagram pillars, particularly the diversification principle. The fund is deliberately not oriented to any index. The main aim is to make attractive yields on a permanent basis. The sub-fund is actively managed. The fund manager determines, regularly reviews and, if necessary, adjusts the composition of the portfolio exclusively in accordance with the criteria specified in the investment policy. The sub-fund is not managed in reference to a index.

EXPLANATORY NOTES REGARDING PERFORMANCE

Past performance is no indication of current or future performance. The performance data do not take into account the commissions and costs incurred in the issue and redemption of units, which may reduce the performance. Exemplary model calculation assuming a front-end load of 5%: an investor wishes to purchase units for 1,000 EUR (or CHF). With a maximum front-end load of 5%, he must pay a one-time fee of EUR 50 (or CHF) on purchase. Custody account costs may also be incurred.

Please refer to the cost details presented in this document to determine the maximum front-end load for the unit class of the subfund.

Where performance is compared to a benchmark, such a comparison is provided for information purposes only and does not imply any obligation on the part of the fund manager to achieve the level of the benchmark or replicate its performance.

MONTHLY COMMENTARY

March was the best month for equities so far this year. The prospect of a reopening of the economy created optimism around the world, which particularly boosted the shares of companies that have suffered greatly from the Coronavirus pandemic. Despite the rise in interest rates in the USA, where 10-year government bond yields have reached their pre-Coronavirus level of 1.74 per cent, equities posted significant gains. Both the global MSCI World equity index and the US S&P 500 equity index were quoted at new all-time highs (in euro terms). From the perspective of the eurozone, this was helped by the strong US dollar, which appreciated by 2.9 per cent against the euro in March. Defensive consumer stocks, which had been spurned until February, also recovered and contributed to the positive performance of the Fund, whose price rose by 4.15 %. The largest value contributors came from stocks in various sectors, notably Facebook, 3M and Nestlé. Slight declines in value were seen in some stocks from the technology sector. The gold price lost slightly in value with minus 1.5 per cent and in the meantime reached USD 1,677 which is a new low so far for this year. In euro terms, however, there was an increase of 1.4 per cent over the month. The composition of the portfolio remained largely constant in March, although we took advantage of the weakness in the technology sector to expand individual positions. The bond portfolio has now been reduced to almost zero. The equity quota is 80.3 %. We are focusing both on stable earnings from defensive stocks and on high-growth companies. The technology sector currently has the largest weighting in the Fund with 22 per cent, ahead of defensive consumer stocks with 17 per cent. Although the technology sector has underperformed since the beginning of the year, stocks such as Alphabet and Facebook were among the biggest performers in the Fund in the first quarter. Our goal remains to identify sustainably convincing business models that defy short-term fluctuations and market rotations.

FUND MANAGER

Dr. Bert Flossbach

Dr Bert Flossbach co-founded Flossbach von Storch in 1998, and has been a member of the board ever since. He is responsible for the areas of research and investment management.

"Active, benchmark-independent portfolio management always starts with a blank sheet of paper."

Flossbach von Storch - Multiple Opportunities II - USD-IT

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals indirect). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals [indirect] (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the KIID and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: over 5 years

RISK/RETURN PROFILE

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium fluctuation, therefore the profit potential and loss exposure may be moderate. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
